INTRODUCTION

Sanitation workers play an important role in maintaining the health-hygiene in the communities. The aim of this study is to find out socio-economic condition, lifestyle, common health problems, occupational behavior of the sanitation workers. Sanitation worker or sweeper are a part and parcel of our society. They work hard from morning to evening to clean the Dhaka city. But they are treated polluted or untouchable in working sector, we should respect them and their job for the society and make a good human relationship with them. They have been deprived of all types of civil facilities including education and health care services. They have been passing their days in unbearable sorrows and sufferings without electricity, pure drinking water and supply of gas[1]. they are exposed to certain health problems by virtue of their occupation. These health hazards include exposure to harmful gases such as methane and hydrogen sulphide, cardiovascular degeneration, musculoskeletal disorders like osteoarthritic changes and intervertebral disc herniation, infections like hepatitis, and skin problems, respiratory system problems and altered pulmonary function parameters.[2]

METHODS

This was a cross sectional type of descriptive study .149 respondents were selected and data was collected from them by Face-to-face interview.
